

Switch to a
decentralized
drive solution
with Lenze

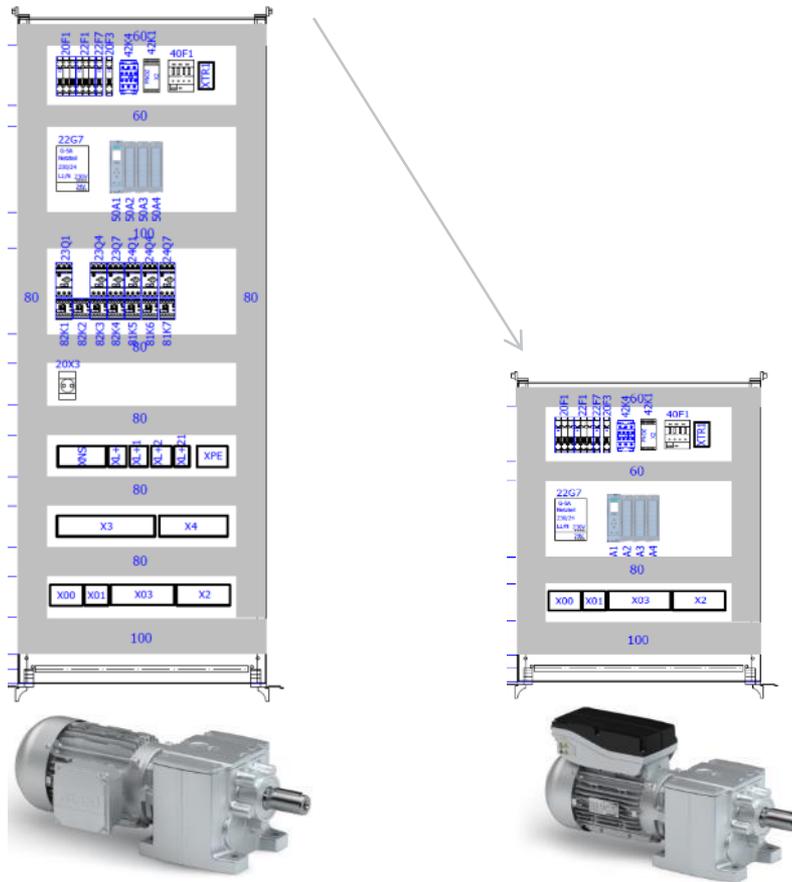

Modularization and standardization

Lenze offers a standardized modular machine structure for a worldwide use which fulfils the requirements of the end user easily.

The module must be equipped as a complete automated conveyor segment with defined interfaces for the machine function, the power- and automation connection.

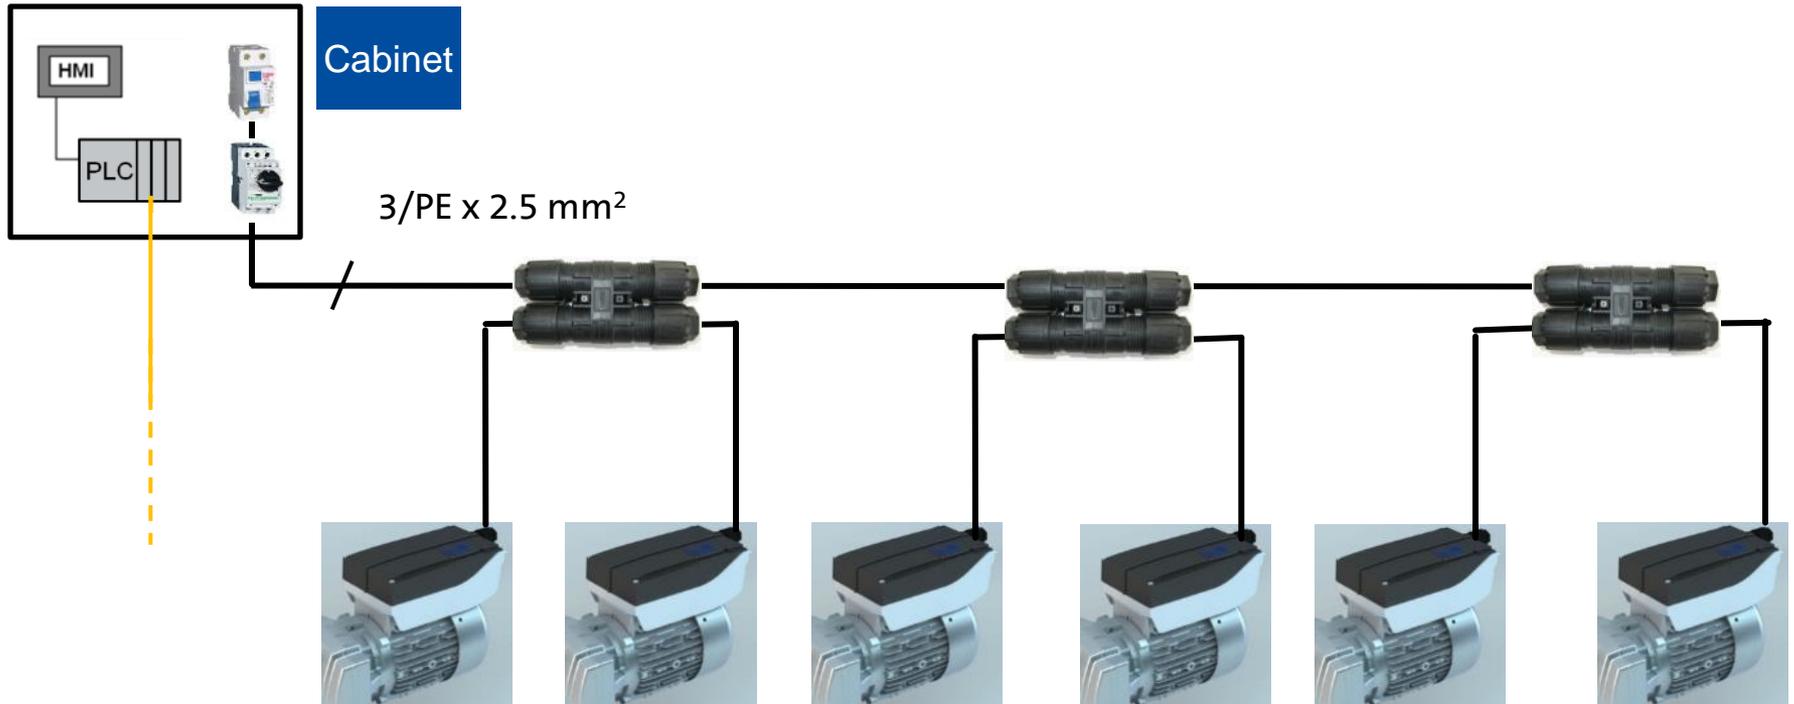

Concept for small cabinet

- Integration into the machine
- Shorter cable
- Less cost for cable channel
- Less effort for engineering (location, construction)
- Less costs for the cabinet

Less wiring via Daisy chain

Reduce costs and quality risk
with decentralized power distribution

Lenze – solution summary

- small cabinet
- less cable
- less engineering time
- less manufacturing time
- less variants
- less operational cost

- Defined Start/Stop ramps
- standardization and modularisation
- Simplicity and reduced complexity
- flexible automation concept
